EDUCATION

Dartmouth College, Hanover, NH **June 2028**
B.A. in Computer Science · Minor in Human-Centered Design **GPA 3.71/4.0**

Relevant Coursework: Design Thinking, Software Design and Implementation, Full-Stack Web Development, Security Engineering.
Honors: Faculty Citation for Meritorious Performance, Full-Stack Web Development

EXPERIENCE

Product Commercialization Intern **May 2026-August 2026**
EchoStar Corporation, Littleton, CO

- Built and handed off a Snowflake-backed Streamlit dashboard for product leadership (Chris Belter, Nitu Arora), consolidating performance metrics across **~13 first-half 2026 product launches** from a dataset of **hundreds of thousands to millions of rows**.
- Used CoCo, CoWork, and Gemini to draft SQL, Python, and data-normalization logic, then personally reviewed, debugged, and validated every AI-generated output before it shipped — **hands-on human-in-the-loop practice with generative AI**.
- Ran stakeholder interviews and usability sessions with product teams to scope requirements, then **documented findings and specs** so other teams could build against them; revised an early version to expose more underlying figures after leadership found it summarized data too heavily.
- Validated dashboard outputs against predetermined expected results and existing internal dashboards before handoff; selected **Streamlit** over Looker Studio and Tableau after weighing security, licensing, and integration tradeoffs.

Product Manager, Evergreen.AI **Mar-Jul 2026; Aug 2026-Present**
Dartmouth Center for Technology and Behavioral Health, Hanover, NH

- Promoted from Project Assistant to Product Manager, expanding from leading a six-person design team to owning design and development for the full product team on an AI wellness app backed by **$5M in Dartmouth research grant funding**, shaping the product's direction and taking it into testing with a **research group of 200 students** inside a formal research-governance process.
- Scoped and shipped an onboarding redesign from student research and usability findings, adding skip options after testing revealed friction in the initial flow.
- Partnered with engineering and research staff to negotiate a scope tradeoff — committing to a future A/B test of reduced data permissions instead of an immediate change — to protect the V1 delivery timeline, and held new partner feature requests until engineering capacity allowed them in.

PERSONAL PROJECTS

Personal Dashboard — Personal Project **2026-Present**
github.com/Alex-Cruz-Valencia/Personal_Dashboard

- Designing and building a full-stack personal dashboard (Next.js, TypeScript, Node.js) end-to-end using **Claude Code, Cursor, and Codex** — a self-directed, hands-on way to build AI product and engineering fluency outside of coursework.
- Shipped Gmail, Google Calendar, and Todoist integrations that let me view and edit tasks, events, and email in one place, plus weather and theming, delivered across **five independently-scoped phases over 24+ commits**.
- Currently extending it with an AI-generated daily summary layer (Anthropic API); applying the same human-in-the-loop review discipline I used with AI-assisted code at EchoStar before merging any AI-suggested change.

Project Manager **September 2025-March 2026**
Design Corps, Hanover, NH

- Co-led a two-person research subgroup reporting through Dartmouth's Residential Communities Working Group to SVP Jennifer Rosales; ran **23 stakeholder interviews, a 10-person group interview, and a focus group across 41 student voices**, informing planning for Dartmouth's **~$500M Residential Communities capital initiative**.
- Wrote up findings that were cited by name in a report from **Dartmouth's President's Office** and the Working Group's official June 2026 report to Dartmouth leadership; presented to senior leadership and at Technigala.

SKILLS & INTERESTS

Technical: SQL, Python, Snowflake, Streamlit, JavaScript/TypeScript, Next.js, HTML/CSS, Figma | AI Tools: Claude Code, Cursor, Codex, CoCo, CoWork, Gemini
Product: Requirements definition, product documentation, prioritization, usability testing, cross-functional collaboration, stakeholder communication
Languages & Interests: English and Spanish | Boxing, poker, custom mechanical keyboards
